GARDEN WARFARE RULEBOOK

Objective

The garden is brimming for war. Two sides of the fence. Critters, flowers and fae alike want the ground. Can you gain dominance and win the turf.

Garden Warfare is a grid battler where you must place critters in a 3x3 grid to outscore the directly adjacent opponent critter to gain win tokens. The player with the most win tokens will win the game. But watch out, critters will have a range of abilities and scoring powers to make use of and out-play your opponent.

Contents

54 critter cards

24 Tag Tokens

5 Blank Tokens

20 Win Tokens

30 modifier tokens

9 grid reference tokens

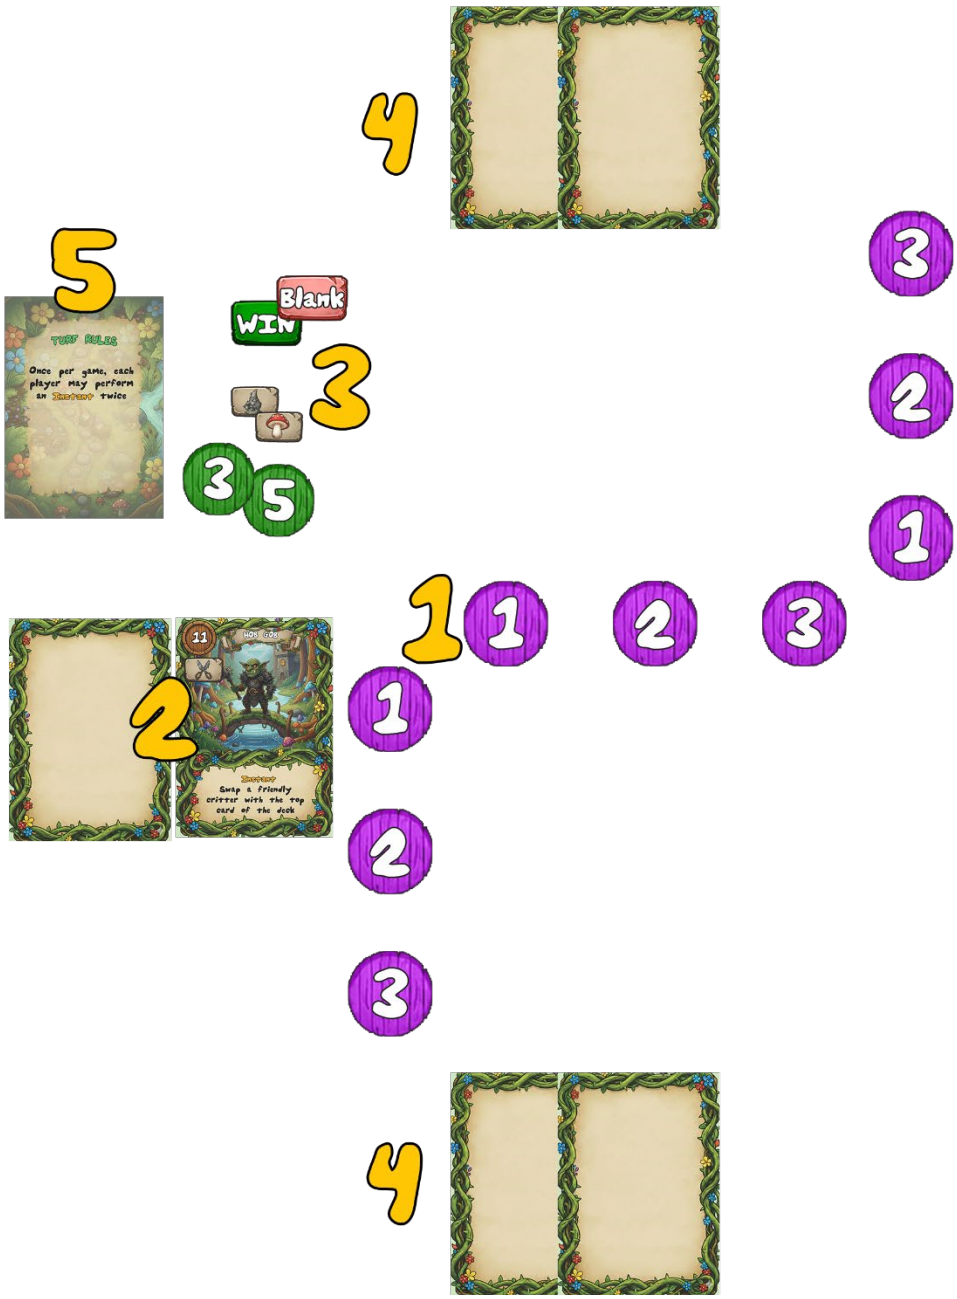

Setup

1: Setup the Grid reference tokens in such a way to form the 3x3 grid. Making space for a critter card in each location.

2: Shuffle the critters together and make a face-down deck. Flip over the top card. This will be the discarded card.

3: Create a supply of all other tokens near the 3x3 grid in range of both players.

4: Randomly assign a starting player. Both players draw 6 cards.

Core Gameplay

Players will take turns placing a critter card in to their 3x3 grid until their grid is full. At the end of the game, players will individually compare the total points of each critter compared to its directly opposite critter on the grid. If a critter outscores the opponent, then they gain a win token. If the critter has 10 more points than the opposite critter, then they get an additional win token. This continues for +20, +30, etc.

Critters

1: Critter's name

2: Critter's score

3: Critter's tags

4: Critter's ability. This will either be an Instant – performed straight away or End Game – additional points the critter may get at game end.

To calculate the points a critter will get at game end, add the following:

Critters score printed on the card + modifier tokens on the critter (these will be gained from instant abilities) + any End Game ability (that will plus or minus the score based on criteria).

Phases

Critter– Players take turns playing a critter in to their grid. In this phase, they may place up to 3 critters face down. These critters will be flipped face up in the Reveal Phase.

Reveal– Players take turns revealing one of their face down critters. If a critter with an Instant is revealed, then the ability is performed now. After one critter is revealed, then the next player has their turn.

End Game– Each critter is compared to its opponent and the highest score gains the win token. The player with the most win tokens, wins the game.

Critter Phase

The current player will:

1: Draw a card from either the deck or the discard area in front of them.

2: Play a critter to any empty position in their grid.

- If played face up, resolve any Instant ability on the card now.

- If played face down, the critter will be resolved in the reveal phase.

3: Discard a critter from their hand to the opponents discard area.

It will then be the next players turn.

After Rounds 3,6,9

After rounds 3, 6 and 9, players will simultaneously

1: Remove all critters from their discards.

2: Draw up to 6 cards.

The starting player will then go to the other player.

Reveal Phase

Players will take turns flipping over their face down critters.

- Resolve any Instant ability on a revealed card now.

End Game Phase

Going from position 1-1 and through each position in the grid, each player calculates the points on each critter and compares them to the opponent's critter. The player with the critter with the higher score than the opponent, gains a win token. Any score difference with multiples of 10 or more will gain that many additional win tokens. Place all win tokens on the critter.

- Tied scores do not count as a win and no win token is granted.

The player with the most win tokens is the winner. If still a tie, the player that has won more individual critter victories is the winner.

Abilities and Tokens

The following are all gained from instant critter abilities. These abilities often target other critters. A face down critter can be targeted by abilities, with the exception of - if the ability specifies a tag that can't be seen then the critter can't be targeted. Do as much of the ability as you can. For example, if the ability states to target 2 critters, but there is only one, perform it on the one.

Tag tokens can be added to critters that will effect abilities

Both tags and end game scoring abilities can be blanked. Add a Blank token to indicate this. If these elements are blanked, they act as if its not there.

Modifier tokens are added to cards to bolster their final total. These are double sided and strength of 3 or 5.

Module: Turf Rules

At the start of the game, you may add a Turf Rules card to the game. Both players have access to the condition or ability on the card.
