- 1-4 Players
- Ages 13+
- 15-20mins / player

Objective of the Game

As an Egyptian scribe, you must position papyrus on your board and use the powers granted from the Gods to gain the most points.

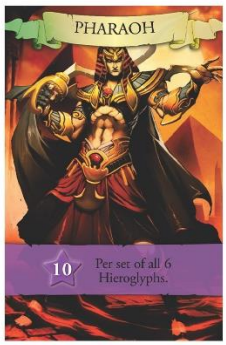

Contents

72 Papyrus Cards

10 God Cards

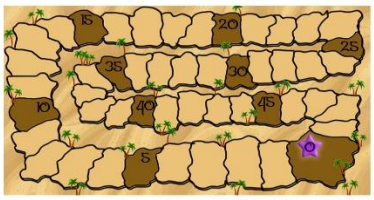

3 Pharaoh Cards

8 solo cards

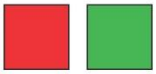

8 Aten cards

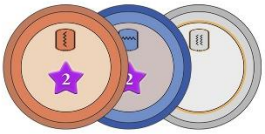

Scoreboard

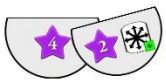

Score Tokens

24 player markers (6 per playet)

32 Remnants

8 Remnant Upgrade Tokens

42 Hieroglyph Tokens

8 Movement Tokens

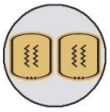

1 Serquet Token

2 Horus Tokens

8 Amun Tokens

10 Thoth Tokens

4 Player Aids

Setup

Player Set up

1. All players choose a colour and place all their markers in front of them in their supply.
2. Each player takes 8 remnants (2 in each colour).
    a. From left to right place 4 different coloured remnants in any order.
    b. From top to bottom, place remnants in a matching-coloured order to the top row.
    c. Make sure there is space for a 4x4 grid of papyrus cards.
    d. In the top row, flip to the inactive/white side remnant 1 and 3.
    e. In the left column, flip to the inactive/white side remnant 2 and 4.
3. Each player takes a player aid and randomly assigns a first player.

Communal Setup

4. Shuffle the Papyrus cards and place them face down in a stack to form a deck.
    a. Each player gains 6 papyrus cards from the top of the deck to make their hand. These are hidden to other players.
    b. Deal out 4 papyrus cards to form the market face up.
5. Choose the 5 Gods for the game. Randomly take one from each symbol type and place them face up. There should be on of each icon type present.

For a first game, it is recommended to use Tawaret, Isis, Maat, Serquet and Ptah.

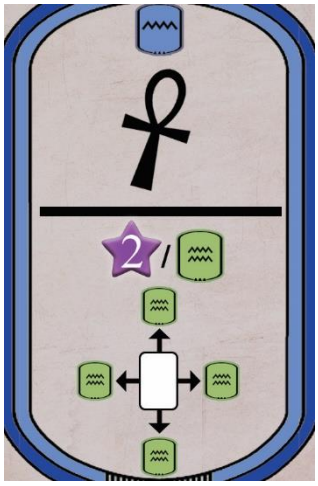

6. Choose to play either the A side or B side of the God scoring tiles and randomly place one under each God. (make sure that they are all on the same side)

For a first game, it is recommended to use A

7. Place the score track. Each player places a marker of their colour at the 0 score.
8. Place all the tokens in their own piles in reach of all players. You may also want to place tokens next to their respective Gods.
9. If playing with the Pharoah module **(not recommended for first game**), randomly place one face up so that everyone can see.

Game Overview

Players will take turns playing a Papyrus card from their hand to their 4x4 grid (created by the remnants). Papyrus cards will have 2 purposes and the reasons why they may be placed in certain positions of the grid:

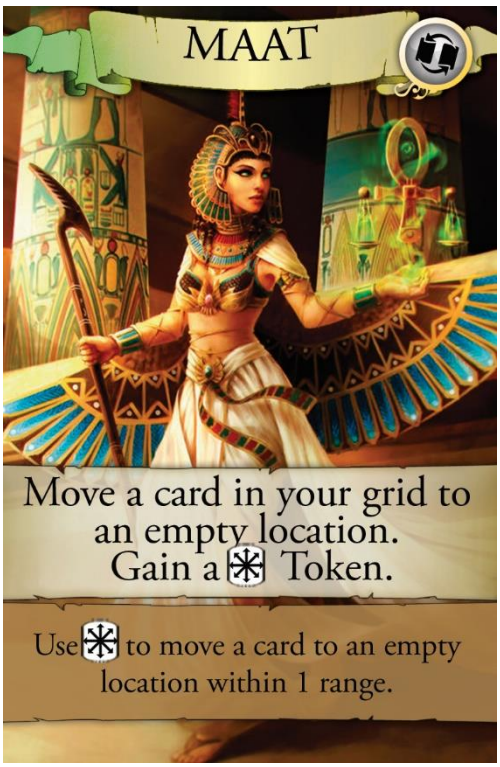

The top of the card has hieroglyphs. When cards are positioned in a specific order (left to right or top to bottom) that matches a God objective, the player can claim it gaining points and other rewards.

The bottom of the card is an instantaneous ability that the player performs when the papyrus card is played into their grid. Most of these will give points based on existing elements of their grid.

Additionally, players in their turn can discard a card from their hand to perform one of the available God abilities.

All your papyrus cards can be moved and manipulated with these God powers, making it dynamic for scoring opportunities.

Turn Structure

Each turn, a player will perform the following phases.

1. Main Phase
2. God Phase
3. End of Turn Phase

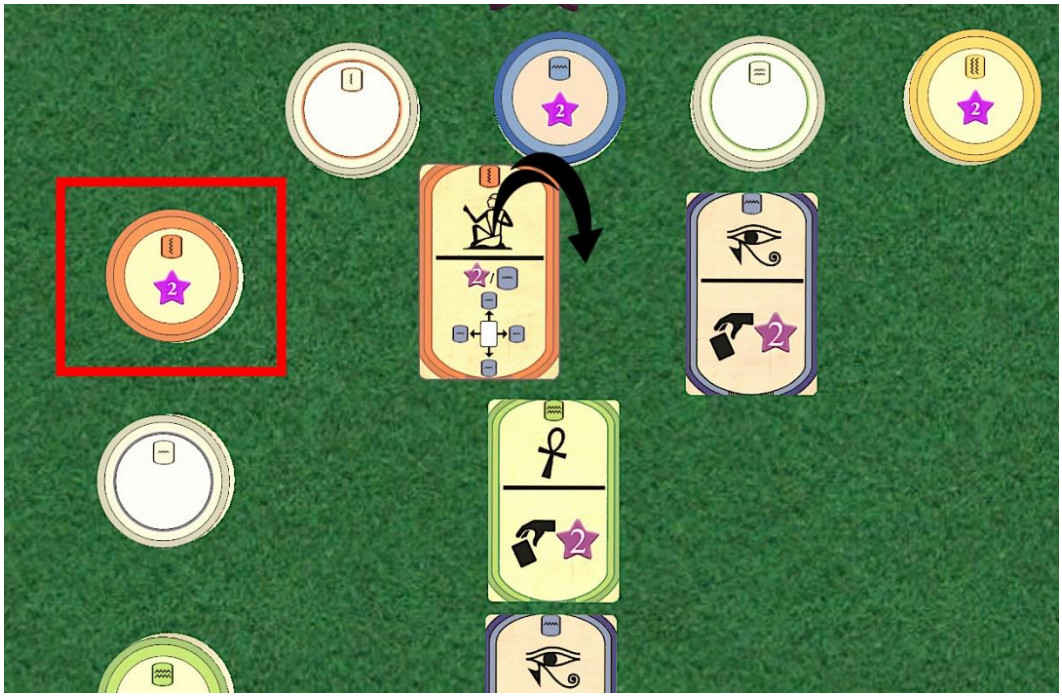

It will then be the next players turn (left) until all players have filled their Grid.

Main Phase

Players can perform one main action and any number of additional actions that they can and are allowed in the Main Phase.

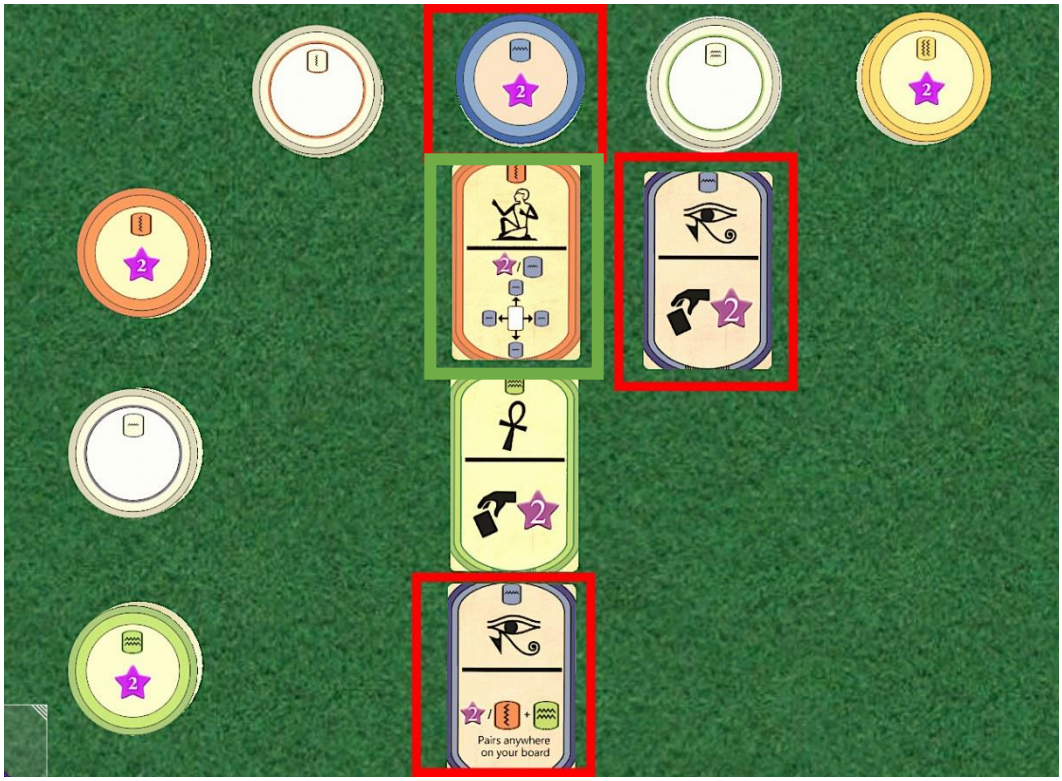

Main Action

1. Players play a card from their hand onto an empty position in their Grid.
2. Players trigger any Remnant rewards if they match the icon of the papyrus placed to the remnant on the outside of the grid.

In this example, the player matches the red icon on the left to where they placed the papyrus card. And they gain the reward on the remnant -> 2 points.

3. Perform the bottom ability on the card played. *See page 7 for a list of all abilities.*

For this card, the player will gain 2 points for every blue icon in the row or column it is placed. Remnants are also included for abilities. The player will gain 6 points.

Additional Actions

As well as the main action, players can perform additional actions. These additional actions can be performed before or after the main action. But once the main action has started, its needs to be finished before an additional action is started.

- Perform a God ability by discarding a card from your hand. The five Gods on display will all have varying powers that can manipulate your grid, making it easier to score points.

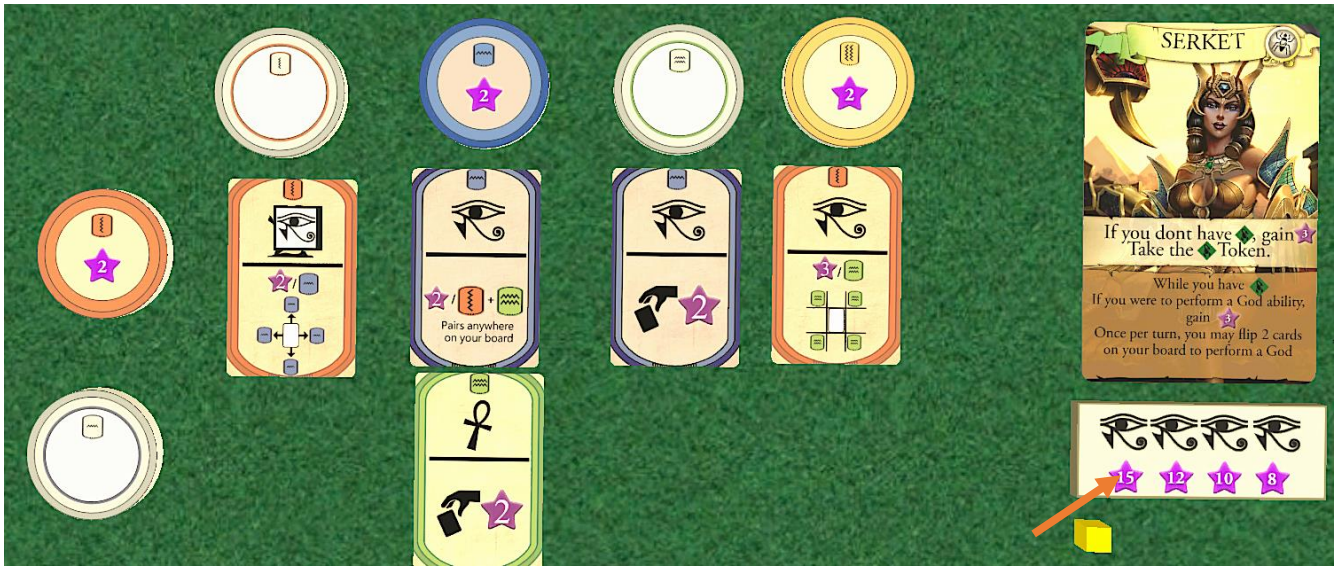

You can only perform a God ability this way once per turn. If you can't place a card into your grid in your turn, you can't perform a God ability this way.

- Use Tokens that you have gained and are in your supply. *A full list of tokens and God powers can be found on page 9*

God Phase

If a player has completed one of the God objectives in either a **row (left to right) or column (top to bottom)**, the player will.

1. Move one of their player markers to the highest point number not taken and increase your score by that amount.
2. Perform the ability of the God (this does not require discarding a card).

If a God ability allows you to complete another God, you may claim and perform the above steps again.

You can't complete the same god more than once. You can however manipulate the papyrus cards after completing the God objective for other scoring opportunities.

End of Turn Phase

1. Players draw a card to their hand from either the Market or the top card of the papyrus deck.
2. Refill the market with any empty positions. This is the only time that the market is refilled. Any cards removed from the market during the players turn does not get refilled.

If there are any end of turn abilities from God abilities or tokens, they can use them now.

End of the Game

When all players have had their 16 turns, filling up their grid, players calculate their total score.

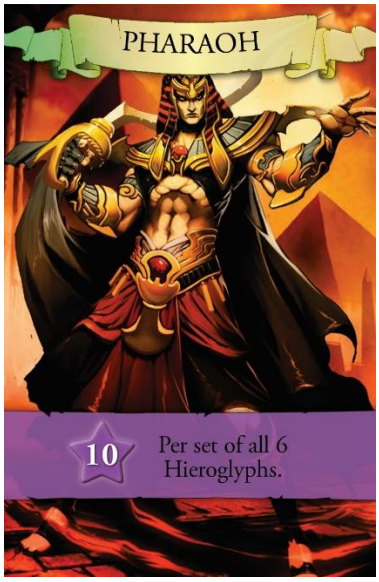

- All points gained through the game.
- If using the A side of the objectives, all players gain 2 points per Ankh.

- All players gain 1 point per token left in their supply.
- If using the Pharaoh module, calculate their points now.

Pharaohs

Pharaohs provide additional scoring at the end of the game.

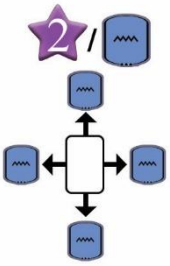

.

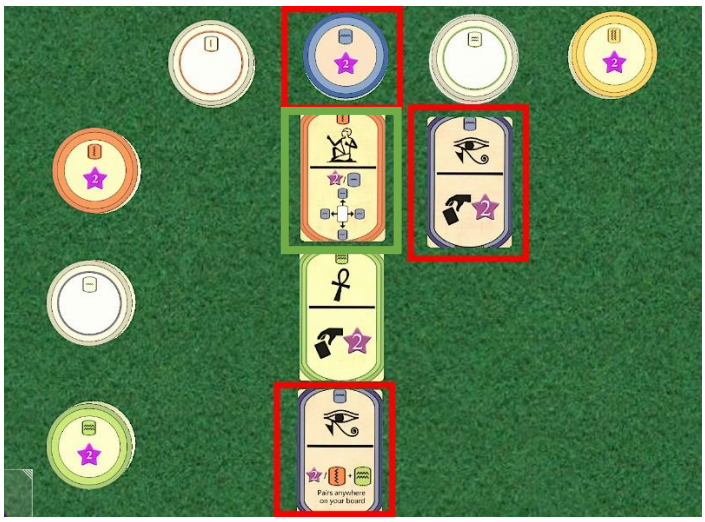

Card Abilities

 A lot of abilities will reference the different icons.

 The purple icon is wild. For every time an icon is required, the purple icon can change to be an icon of your choice.

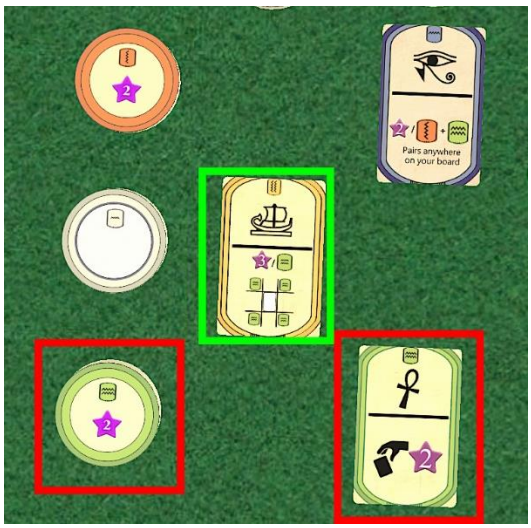

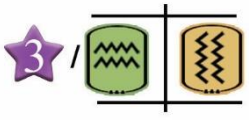

Based on the location of this papyrus you have placed, gain 2 points for every matching icon in the row and column.

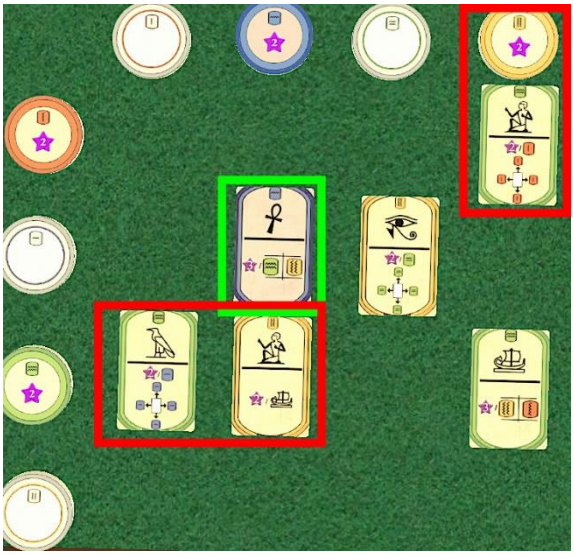

Based on the location of this papyrus you have placed, gain 3 points for every matching icon in the four directly diagonal positions.

Score 3 points for every directly adjacent pair of matching icons (vertical or horizontal) anywhere on your board.

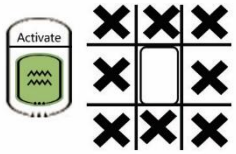

You can only use the each icon for one pair

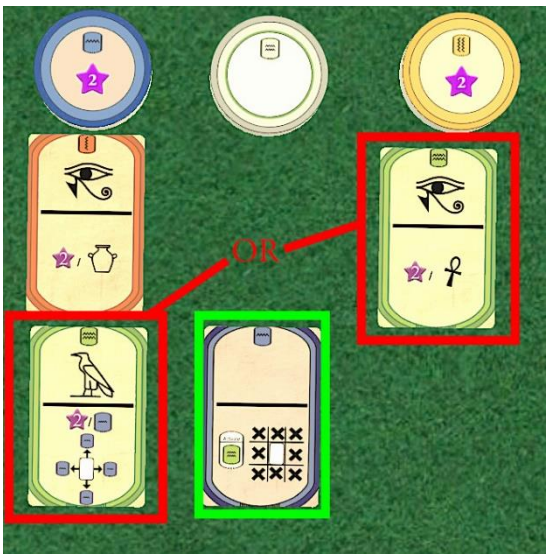

Score 2 points for every matching hieroglyph anywhere on your board

Activate another papyrus card with a matching icon on it that is within any of the 8 spaces around this card.

Draw a card from the market or deck and gain 2 points

Hieroglyph Tokens

Hieroglyph Tokens are stored to your supply until used. There are tokens for each of the 6 different hieroglyphs on the papyrus cards.

When you play a papyrus from your hand on your turn, you may replace the hieroglyph on the card with a hieroglyph token in your supply.

Papyrus cards without hieroglyphs can't add a token to it. If you place a hieroglyph token on another hieroglyph token, the bottom one goes back to the central area.

If a papyrus with a hieroglyph token on it is moved in the grid or to the market, the hieroglyph stays with it. If a papyrus with a hieroglyph token is discarded or added to a player's hand, the token will go back to the central area.

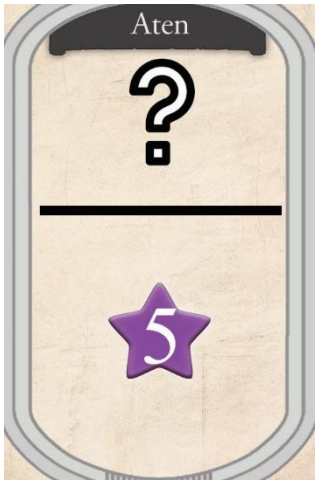

Gods

Gods are categorized into different categories. You must choose a God from each category.

Aten

Take a Hieroglyph Token into your supply. Take an Aten Card into your Hand.

Aten cards can be played onto your Grid. ? counts as all hieroglyphs. If you complete a God with an Aten card, flip it over with its back showing.

Aten cards are extra cards in the players hand, and can also be used to discard to perform a God power.

Isis

Take 2 different Hieroglyph Tokens into your area. You may place one on a card now.

The placed hieroglyph token must replace a hieroglyph and can't be placed on an empty space.

Tawaret:

Swap a card on your grid for a card in the market. (do not activate anything)
At the end of your turn, draw an extra card and then discard 1.

Ra:

Setup: Create a face down pile of Sun Tokens. Grab Sun Tokens from the top of the pile. If the pile is ever empty, shuffle the tokens and reform the

Randomly add a Sun Token to each card in the Market.

At the end of your turn, draw an extra card and then discard 1.

If any player grabs a card in the Market with a Sun Token, they gain the benefit instantly.

Swap 2 cards in your Grid

Gain 3 points

Gain any Hieroglyph Token

Gain a movement token

Flip to the active side any remnant

Move any remnant to any empty location around the edge of your grid

If the market is refreshed. Remove all Sun Tokens.

Only one Sun Token can be added to a card. If Ra is to be activated when there are already Sun Tokens out, only add tokens to the cards without Sun Tokens

Hathor:

One at a time, move up to 2 cards with different icons in your grid to new empty locations. Trigger any remnant bonuses if they match.

Maat:

Move a card in your grid to an empty location. Gain a movement token.

Movement tokens can be used at any time in your turn to move a card to a new empty position within the 8 surrounding locations.

Horus:

Take either of the Horus Tokens.

While you have the left red eye of Horus token -> You gain 2 points at the end of your turn. And you may refresh (wipe the cards and redraw) the market before drawing.

While you have the right yellow eye of Horus token -> If you finish a row or column, score 2 points and then move that columns remnant to a new location.

Serquet:

If you don't have the Scorpion Token, gain 3 points

Take the Scorpion Token

While you have the scorpion token -> If you were to perform a God ability, gain 3 points.
Once per turn, you may flip 2 cards on your board to their inactive side to perform a God ability.

Ptah:

Choose 2:
1: Flip a Remnant to its active side.
2: Upgrade a Remnant (see below). Note each player may have a max of 2 upgrades
3: Move a Remnant to a free location on the edge.

Gain 4 points

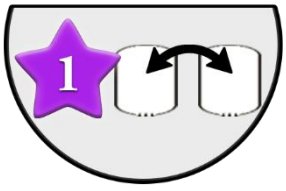

Gain 2 points and a movement token

Gain 2 points and gain any Hieroglyph Token to your supply

Gain 3 points and a refresh the market now. (wipe the cards and redraw)

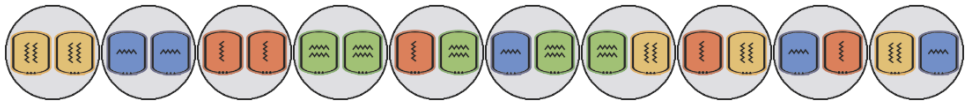

Gain 1 point and swap any 2 cards on your grid now.

Thoth:

Flip a Remnant to its active side.
Place a Thoth Token on a card in your grid. Trigger any Remnant matches with it.

Thoth Tokens replace the existing icon on the card.

Solo Mode

In the solo game, players must verse the solobot and outscore them. Players play the same way as a multiplayer game. The actions of the solobot will depend on the solo deck that they will draw from.

Setup

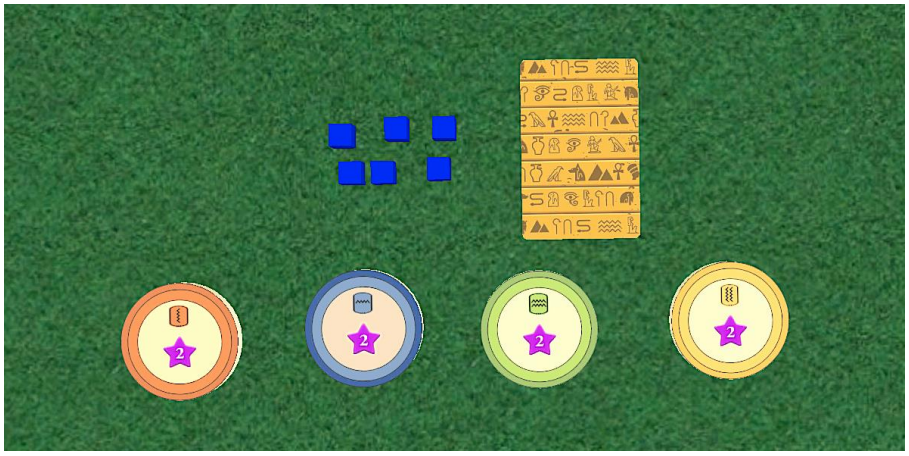

Setup the game exactly the same as a multiplayer game.

Bot Setup

1: Get one of each coloured Remnant and place all face up in front of them.

2: Get all tokens of a colour your not using and place them in their supply. Place one on the score track.

3: Get their solo deck of 8 cards and shuffle face down to form their deck.

Turn

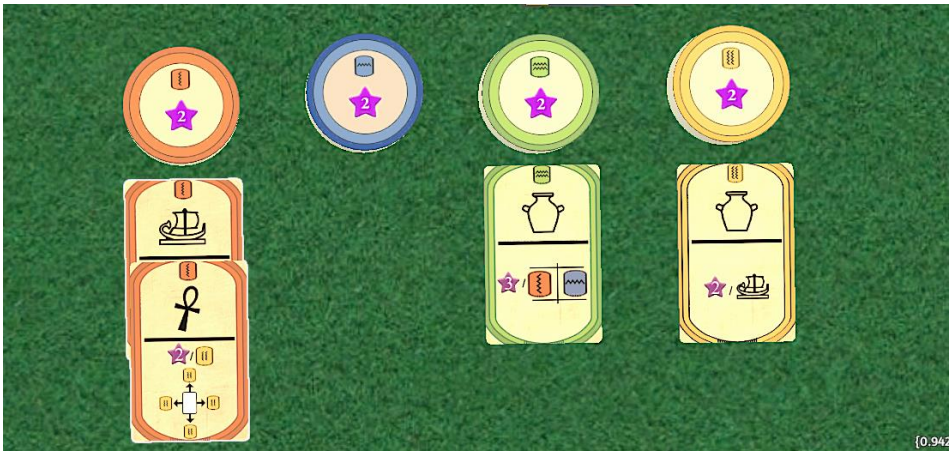

Players will take their turn the same as a multiplayer game.

Bot Turn.

1: Flip over the top card of the Bot deck. This will indicate the card that they will take from the market.

2: Add the card from the market below the matching-coloured icon. If there is a card already there, place it below it with the hieroglyphs still showing.

If the card is purple, add it to the column with the least cards in it. If theres a tie, you choose the column.

3: The bot scores 2 points for every matching icon in the stack (including the remnant).

For example in the above image, if red was added, the bot would score 6 points.

4: If a bot finishes a row of cards then the bot gains 1 hieroglyph token.

Look at all the hieroglyphs in their area and then pick a hieroglyph based on the following.

- 2 matching hieroglyphs on cards and their hieroglyph tokens.
- 1 hieroglyph on cards and tokens.
- 0 of that hieroglyph.
- 3 or more matching hieroglyphs on cards and their hieroglyph tokens.

if there is a tie, then you choose

If a hieroglyph token has run out, go to the next best version.

5: If the card has a chaos symbol on it, then they take the matching Gods token that is being used this game (Scorpion or Horus). The bot will always take a token from the player before taking any from the supply.

6: If the bot has 3 or more hieroglyphs on cards plus hieroglyph tokens, then the bot claims the God which has 2 or more matching hieroglyphs and scores those points.

7: If the bot has a chaos token, then they gain 1 point for every chaos token in their supply.

Once the bot has finished their solo deck, shuffle and form a new deck. They will go through their deck twice.

<u>Scoring</u>

The bot scores mostly the same as a player

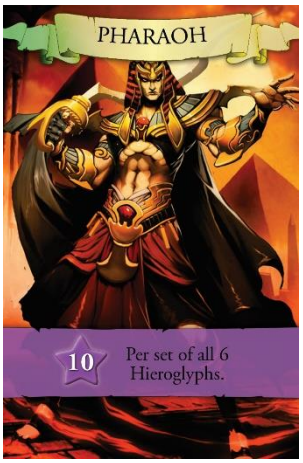

- All points gained through the game.
- Regardless of the player using the A or B side of the scoring, the bot will score 2 points for every Ankh hieroglyph

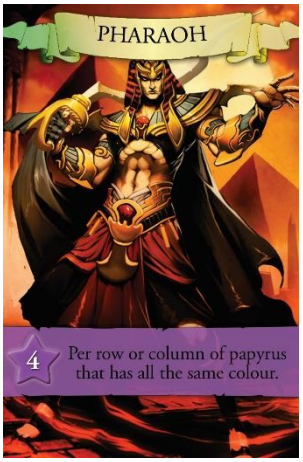

- The bot scores 1 point per token left in their supply.
- If the player is using the Pharaoh module, calculate their points now.

For the hieroglyph the bot has the most of, they score 3 points each.

The bot scores the same as the player.

The bot scores 4 points for every finished row of cards of all 4 colours.
