NATHAN **EVERETT**

SOFTWARE DEVELOPER

Building game features across client and backend, with experience in design, tooling and QA

Greater Sydney, NSW | 0401 887 296 | nathaneverettgd@gmail.com | LinkedIn | Portfolio

PROFESSIONAL PROFILE

Game development generalist with experience in game design, full-stack programming, QA and test automation. Most recently developed UI and backend features for Valorant at Riot Games. Earlier work includes BigWorld game engine tooling at Wargaming and mobile games at Foundation Mobile. Also designs board games, including the Kickstarter-funded, self-published War of Supremacy.

TECHNICAL SKILLS

Programming: C++, C#, Unreal Blueprints, Python, Go, full-stack development

Engines & tools: Unreal Engine, Unity, Microsoft Visual Studio, Photoshop, After Effects, Git, Perforce

Game design: Board and card game design, level design, prototyping

QA & production: Manual and automated testing, debugging, project management, publishing

CAREER HIGHLIGHTS

Valorant feature delivery

- Released the “unseen notification pips” feature for Valorant’s Collections screen at Riot Games. As project lead, wrote the technical plan, worked with stakeholders, artists and UX designers and programmed the implementation, making the screen easier for players to use.

300+ Kickstarter backers

- Designed, developed and self-published the board game War of Supremacy. Secured funding through Kickstarter. Managed the campaign, backer communication, artists, manufacturing and shipping, with the game delivered to backers around the world within the expected timeframe. It also entered distribution through a consolidator.

PROFESSIONAL EXPERIENCE

Riot Games | Sydney

Associate Software Engineer — 2022–2026

Moved into full-stack development following the studio’s transition from Wargaming to Riot Games. Worked in Valorant’s personalisation team, developing features across the game client and backend services.

- Built UI for the Collections screen and other menu systems in Unreal Engine using Blueprints and C++.
- Developed full-stack features in Go on the service side and Unreal Engine on the client for player personalisation data.
- Collaborated with multidisciplinary teams across multiple countries to ship features into a live game.

PROFESSIONAL EXPERIENCE / CONTINUED

Wargaming | Sydney

Junior Automation Engineer 2021–2022

Built and maintained automated tests in Unreal and Python, run through continuous integration builds, for a middleware physics simulation on an unreleased project.

Senior QA Tester 2013–2021

Tested client tooling for the BigWorld game engine, managing versioning across World of Tanks, World of Warships, World of Warplanes and World of Tanks Blitz. Led quality planning and testing within a multinational games organisation.

Independent Projects | Sydney

Independent Game Designer 2016–Present

Projects undertaken periodically alongside employed roles.

Design original board games and pitch them to publishers.

- Develop games at different stages of design, creating sell sheets and videos for those ready to pitch.
- Enter competitions for feedback and publishing opportunities and use publisher databases to find potential matches.

Harris Technology

Sales and Customer Service 2012–2013

Business sales and customer service for a technology retailer.

Foundation Mobile

Games Designer 2011–2012

Worked across game design, level design, prototyping and testing. Shipped titles include Lumi HD, Lumi for iPhone and iPod touch and Dropple on iOS.
